

C YUVA TEJA

Generative AI Engineer

+91 6305783459 • yuvatejac123@gmail.com • Chittoor, Andhra Pradesh, India • Portfolio • GitHub • LinkedIn

PROFESSIONAL SUMMARY

Results-driven Generative AI Engineer and Computer Science & Engineering undergraduate specializing in production-ready intelligent systems, advanced Retrieval-Augmented Generation (RAG) architectures, and high-performance backend pipelines. Proven expertise building enterprise-grade SaaS backends, sub-second financial fintech APIs, and machine learning workflows using FastAPI, Groq LLMs, and ChromaDB. Expert in handling structured data schemas via Pydantic, optimizing inference latency, and deploying secure, cloud-native backend infrastructures.

EDUCATION

The Apollo University

'24 – Present | Chittoor, AP

Bachelor of Technology (B.Tech) in Computer Science & Engineering

- **Core Focus:** Generative AI & LLM Systems, Advanced RAG Pipelines, Backend Engineering (FastAPI), Machine Learning, Natural Language Processing (NLP), Cloud-Native AI Application Development.

TECHNICAL SKILLS

Languages & Backends:	Python, FastAPI, Flask, Pydantic, JSON, REST APIs, SQL, Swagger / OpenAPI
Generative AI & RAG:	LLaMA 3/3.1, Gemini 2.5 Flash, Groq LLMs, Ollama, OpenRouter, Prompt Engineering, AI Agents, ChromaDB, FAISS
Data Science & ML:	Scikit-learn, Pandas, NumPy, Matplotlib, Seaborn, Feature Engineering, EDA, Random Forest, Logistic Regression
Architecture & Tools:	Git/GitHub, Server-Sent Events (SSE) Streaming, JWT Authentication, 2FA, Razorpay Gateway Integration, Render, Vercel
Languages:	Telugu (Native), English (Professional), Hindi (Conversational)

WORK EXPERIENCE

Skillvance Technologies — Generative AI Engineer Intern

May '26 – Jul '26

- Architected and integrated an enterprise AI loan evaluation engine using Groq LLMs, Python, and FastAPI to auto-generate comprehensive credit risk evaluation reports from live multi-dimensional applicant records.
- Engineered production prompt frameworks to securely parse and validate live financial data streams into structured JSON formats.
- Conducted structural integration testing, endpoint routing schema verification, and successfully managed cloud deployment parameters on Render.

Sri Padmavati Mahila Visvavidyalayam — Data Analyst Intern

May '26 – Jun '26

- Designed and built a comprehensive IPL Data Analytics and Match Prediction core engine utilizing predictive Machine Learning.
- Executed advanced Exploratory Data Analysis (EDA) on historical sports datasets to train Random Forest and Logistic Regression models.
- Developed backend data processing and analytical scripting frameworks mapping dynamic predictive insights and real-time game probabilities.

WRINDHA OS — Social Media Marketing Specialist

Jun '26 – Aug '26

- Formulated and deployed algorithmic lead acquisition frameworks across LinkedIn and Instagram networks to expand corporate brand authority.

Alfido Tech & Cognifyz Technologies — AI & Data Analyst Internships

Feb '26 – Mar '26

- Programmed localized data manipulation tasks and engineered automated preprocessing pipelines with Pandas to cleanse messy, raw datasets.

FEATURED PROJECTS

LifeScript — AI-Powered Narrative & Emotional Reflection Engine

- Architected an emotionally intelligent web platform with Flask and Groq API, translating raw personal reflections into dynamic 3-act screenplays, director notes, and visual color palettes.
- Engineered prompt architectures for real-time narrative arc generation, tone extraction, and color theory mapping using structured JSON output pipelines without external classifiers.
- Implemented a zero-persistence ephemeral backend architecture to enforce complete user privacy alongside a custom typewriter-style cinematic UI.

ResearchAI — Intelligent Document Analysis SaaS Backend

- Developed a vector-powered document intelligence core platform utilizing FastAPI and ChromaDB vector store.
- Implemented concurrent multi-document tokenization to index custom data into vector embeddings for instant RAG-driven summary engines.
- Secured application with JWT + 2FA layers, SQLite persistence, Razorpay payment processing endpoints, and real-time Server-Sent Events (SSE) streaming via Gemini 2.5 Flash.

Loan Underwriting Memo API

- Engineered a production-ready credit underwriting microservice pre-loaded with over 15,000 algorithmic fintech profile records.
- Programmed a deterministic risk classification formula mapping metrics into explicit structural evaluation risk tiers.
- Optimized text inference latencies down to sub-second speeds by compiling specialized prompt instructions using Groq LLaMA 3.1.

InvestorLens AI — Startup Evaluator

- Built an interactive core API platform powered by local LLaMA 3 models executed via Ollama to evaluate early-stage venture text pitches.
- Designed robust JSON fallback regex steps alongside 3 separate analytical evaluation engine paths (Friendly, Strict, Shark).

IPL Analytics & Match Prediction Engine

- Constructed Scikit-learn predictive infrastructure using historical data to deploy Random Forest and Logistic Regression models.
- Engineered backend data pipelines mapping dynamic predictive insights and real-time game winner probabilities.

MoodMirror — AI Emotional Reflection Engine

- Created a semantic language processing application running customized NLP rule classifiers to isolate text emotional states.

CERTIFICATIONS

- Skill India Digital Hub Technical Certification
- Qualified ICAT (Internship Common Aptitude Test)
- Generative AI Mastermind Training (Advanced LLM Architecture Frameworks)
- Google Cloud & Tata Group Industry Case Studies
